

# Geospatial Solutions

Fugro Spatial Solutions focuses on providing integrated geospatial solutions and data management

**Fugro Spatial Solutions focuses on providing integrated geospatial solutions and data management to those organisations whose business systems employ geographic information:**

- federal, state & local government
- mining
- oil & gas
- civil construction
- emergency management

**We have a track record of success built around long term client relationships.**

## Geospatial Strategy Development

**We help you develop a clearly articulated Geospatial Strategy and create the supporting framework of technical architecture design, standards, roles, responsibilities and procedures.**

## Geospatial Solutions

**Fugro Spatial Solutions is an established provider of software solutions to clients in Oil and Gas, Mining, Government and Business. We work closely with our clients to deliver straightforward, cost effective solutions that answer real business needs:**

- online spatial resource cataloguing & discovery
- web mapping applications
- bespoke data processing systems
- data warehousing and modelling solutions
- spatially enabled business systems

We can develop customised GIS software solutions including extensions and applications that will integrate with your business workflows and boost the productivity of your users

# Geospatial Solutions

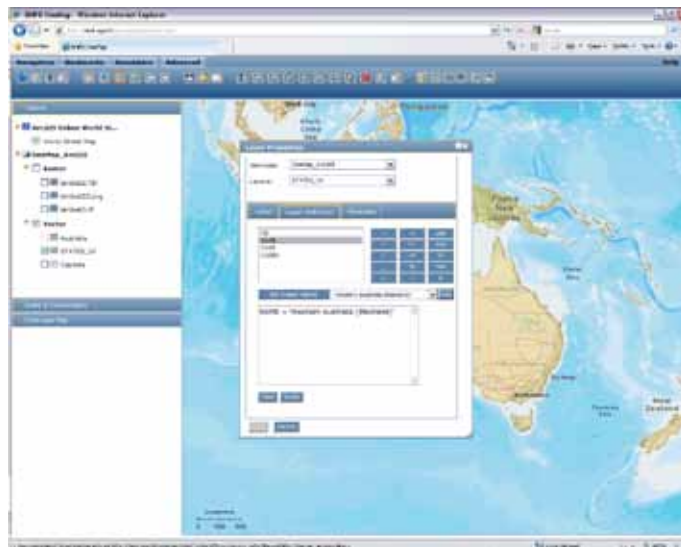

## Spatial Data Management

Through our global experience in the acquisition and processing of most spatial data types, Fugro brings a uniquely pragmatic perspective to the challenges posed by the size, complexity, and diversity of spatial datasets.

Our team of database administrators, data modellers and database developers have an in depth knowledge of database technology that will help you to design and implement robust, scalable and flexible geodatabase solutions that make full use of relational database capability.

We provide our clients with true expert guidance in the areas of:

- spatial data & metadata standards, formats and interoperability
- spatial information management governance and strategy
- business solutions for storing, managing and disseminating all types of spatial data
- geodatabase modelling
- high quality and fast turnaround on all types of spatial data conversion, migration, loading and metrics
- data hosting and web delivery
